I need some assistance scanning a textbook. I've only scanned in the front matter (table of contents, etc) and the first 9 pages and yet it's already 5 MB in size. I'm saving them in JPEG format. I tried GIF but most came out larger and when I reduce the color depth to save space the quality drops to a level that's unacceptable to me. Any ideas of how to do this so that the files come out smaller? I've seen PDF files of textbooks that are much smaller than I'd get if I did it this way
